JOHN CARLO GAMAYO

Full-Stack Software Developer

Bulacan, Philippines | +63 911 352 900 | johncarlogamayo@gmail.com

Portfolio: johncarlogamayo.netlify.app | GitHub: github.com/johncarlogamayo

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Developer specializing in building AI-embedded systems, SaaS applications, and scalable web platforms. Experienced in designing and deploying intelligent applications using LLMs, Retrieval-Augmented Generation (RAG), and automation workflows. Proven ability to go beyond typical development roles by contributing to system architecture, AI pipelines, API integrations, and real-world business solutions. Adept at translating complex technical systems into practical, user-focused applications. Recognized for strong ownership, fast learning ability, and a systems-thinking mindset aligned with modern AI-driven development practices.

TECHNICAL SKILLS

Languages:	JavaScript, Typescript, Python, SQL, C#
Frameworks & Libraries:	React, Node.js, FastAPI, Django
Web & Mobile:	REST APIs, Webhooks, Android Development, Unity
AI & Machine learning:	OCR, LLMs, RAG, Embeddings, Knowledge Bases, Prompt Engineering, AI Workflow Design
Web & Systems Development:	REST APIs, Webhooks, SaaS Development, Full-Stack Systems
Cloud & Infrastructure:	Cloudflare, Reverse Proxy, PostgreSQL, Environment Configuration
Core Competencies:	System Architecture, API Integration, Debugging, Testing, UI/UX Design

PROFESSIONAL EXPERIENCE

Software Developer Intern

Lightweight Global Tech Solution Corp / Quezon City, Philippines
December 2025 - March 2026

- Developed and maintained full-stack web applications using Typescript, React, Python, FastAPI, and PostgreSQL for internal and client-facing systems
- Implemented OCR-based document processing pipelines, automating data extraction from scanned and handwritten documents and mapping outputs into structured PDFs
- Enhanced OCR accuracy through prompt rules, positional logic, and validation to prevent duplicate or incorrect data mapping
- Integrated AI-powered features including embeddings, Retrieval-Augmented Generation (RAG), and knowledge base workflows
- Designed and implemented multi-platform messaging integrations (Facebook Messenger, Instagram DM, WhatsApp) using Meta Graph API and webhook architecture
- Built secure webhook handlers with HMAC-SHA256 signature validation, environment-based configuration, and structured logging
- Configured Cloudflare reverse proxy and tunnels for local-to-public webhook testing and production readiness
- Fixed critical backend and frontend issues across authentication, email verification, API keys management, file uploads, and real-time streaming responses
- Participated in system architecture discussions, database schema updates, migrations, and deployment preparation
- Authored technical documentation for integrations, testing workflows, and setup guides for internal developers and future clients
- Regularly presented development updates to senior leadership, including CTO and CEO, and proposed architectural improvements

PROJECTS

Eveia - AI-Powered Saas Platform | *Internal Product at Lightweight Global Tech Solution Corp*

- Contributed to the development of an AI-powered Saas platform for document processing, knowledge bases, and business messaging automation
- Implemented OCR pipelines to extract structured data from scanned and handwritten documents
- Integrated Retrieval-Augmented Generation (RAG) using embeddings for AI knowledge retrieval
- Developed and tested secure webhook integrations for Facebook Messenger, Instagram Direct Messages, and WhatsApp Business
- Improved backend stability, streaming responses, API key management, and timezone handling

Scholarly Aether — AI-Powered Research SaaS Platform

- Designed and deployed a web-based AI system for researchers with knowledge base creation and intelligent querying
- Implemented RAG architecture for accurate AI responses based on structured data
- Built features for data ingestion, document processing, and AI summarization
- Designed system to be model-agnostic using OpenAI-compatible APIs for scalability and flexibility

DriveWise - Gamified Driving Simulation App | *Unity, C#, Mobile Application*

- Developed a mobile driving simulation game focused on real-world traffic scenarios and road safety
- Implemented interactive gameplay mechanics, scoring systems, vehicle physics, and user progression
- Published on Google Play Store with analytics and user feedback integration

PC Bulacan - E-Commerce System | *Full-Stack Web Application*

- Built a complete e-commerce platform including product catalog, shopping cart, checkout flow, and role-based authentication
- Implemented backend order management and payment simulation using RESTful APIs
- Designed database schema and admin workflows for inventory and order tracking

CyberZone - E-Commerce Website | *UI Design, Backend Development*

- Designed and implemented a modern UI for product management, order tracking, and inventory control
- Developed secure backend logic for order processing and catalog management
- Integrated admin dashboards for monitoring orders, products, and stock levels

BigBrew - Online Coffee Management System | *Web-based Management System*

- Developed an online coffee shop management system with admin dashboard reporting
- Implemented dynamic pricing, product categorization, and image management features
- Built CRUD workflows for products, categories, and orders with clean, modern UI

EDUCATION

Bulacan State University – Bustos Campus 2022 – 2026

- Bachelor of Science in Information Technology

Immaculate Conception School of Sta. Maria, Bulacan 2020 – 2022

- ICT Strand (Senior High School)

ADDITIONAL INFORMATION

- AI & Machine Learning Practitioner with hands-on experience building real-world systems
- Experienced in designing AI-integrated applications from concept to deployment
- Strong focus on secure, scalable, and user-centered system design
